Examiner, Art Unit 1795

DETAILED ACTION

1. Applicant's Amendment After Final was received July 30, 2010. Claims 7-12 were cancelled.

Claim Objections

2. The claim rejections under 37 CFR 1.75 on claims 7-12 as being a substantial duplicate of claims 1-6 are withdrawn, because claims 7-12 have been cancelled.

Allowable Subject Matter

3. Claims 1-6 are allowed. The following is an examiner's statement of reasons for allowance: No prior art teaches a battery pack comprising the plurality of rechargeable batteries surrounded by a frame, the frame including a center frame having a plurality of battery accommodating openings, each battery accommodating opening having a shape and dimensions matching the cross section of the lengthwise center of the battery, the battery accommodating openings holding center parts of the batteries and arranging the rechargeable batteries in parallel spaced relationship; a bottom frame having a bottom accommodating parts that receive bottoms of the rechargeable batteries; and a terminal side frame attached to the circuit substrate and having sealing part accommodating parts that receive sealing pate sides of the rechargeable batteries, as recited by the claims.

The closest prior art is Hamada et al. (U.S. Pat. No. 2004/0058233) (hereinafter "Hamada"). Hamada teaches a battery pack composed of a plurality of rechargeable battery modules (2) where a sealing plate (22) covers an open end of the case and an electrode terminal provided on the sealing plate (22) side and a tubular cover (pack case 8) for accommodating the rechargeable batteries (see pars. 0029, 0045; see fig. 3). Hamada teaches that the electrode assembly has a liquid solution (see par. 0035). Hamada further teaches terminal holes (circuit substrate 15). It is inherent that the circuit substrate would be able to manage the operating state of the rechargeable batteries. Hamada teaches that the battery modules (2) are arranged in parallel and in the same direction and the terminal holes (circuit substrate 15) are mounted on the holding bracket (terminal side frame 3) that holds the sealing plate side of the battery modules (plurality of rechargeable batteries 2), a holding bracket (terminal side frame 3) and holding bracket (bottom frame 4) (see par. 0029; fig. 1). Hamada does not teach or suggest the rechargeable batteries are surrounded by a center frame having a plurality of battery accommodating openings, each battery accommodating opening having a shape and dimensions matching the cross section of the lengthwise center of the battery, the battery accommodating openings holding center parts of the batteries or that a resin mold is provided for covering the necessary surface of the circuit substrate after the circuit substrate is electrically connected to the rechargeable batteries and to input and output terminals.

Other references considered were Marukawa et al. (U.S. Pat. No. 6,275,003) and Masumoto et al. (WO 03/003485).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
